About Remark AI

Remark AI is a global leader in advanced video analytics, leveraging artificial intelligence (AI) and machine learning (ML) to transform traditional CCTV systems into intelligent, proactive security solutions. Through its Smart Safety Platform, Remark AI enables businesses to extract actionable insights from video content, improving situational awareness, operational efficiency and security outcomes.

From facial recognition and object detection to crowd management and ANPR (Automatic Number Plate Recognition), Remark AI provides organisations with real-time monitoring and alerting capabilities, ensuring they can respond instantly to critical events. By integrating seamlessly with existing video infrastructure, Remark AI delivers a scalable, future-proof solution for businesses across multiple industries.

The Partnership with Secure Logiq

The collaboration between Remark AI and Secure Logiq brings together the cutting-edge AI-driven analytics of Remark AI with the high-performance, resilient server technology of Secure Logiq. This partnership ensures organisations can process, store and analyse vast amounts of video data with unmatched speed, reliability and efficiency.

With Secure Logiq's powerful, purpose-built servers, businesses can deploy Remark AI's video intelligence solutions at scale, unlocking new levels of automation, security and operational insight. Whether for smart cities, critical infrastructure, retail or transportation, this partnership provides a seamless, high-performance video analytics ecosystem.

Industry Impact

From smart cities and law enforcement to corporate security and retail analytics, organisations worldwide are turning to AI-powered surveillance to enhance safety and efficiency. With Secure Logiq's high-performance server solutions supporting Remark AI's intelligent video analytics, businesses can now unlock new levels of automation, accuracy and operational insight.

This partnership ensures companies can move beyond passive surveillance—instead, leveraging real-time alerts and deep video insights to improve decision-making, optimise resources and enhance public safety.

Key Benefits

- **AI-Powered Intelligence** – Transform CCTV into an active security tool with facial recognition, behavior analysis and object detection.
- **Seamless Integration** – Secure Logiq's purpose-built hardware ensures fast, reliable AI processing for real-time analytics.
- **Scalable & Future-Proof** – Designed to handle high camera counts and large-scale deployments without compromising performance.
- **Enhanced Security & Safety** – Fire and smoke detection, crowd monitoring and access control integration ensure a proactive approach to risk management.
- **Optimised Video Processing** – Secure Logiq's high-speed, high-storage servers allow businesses to analyse and store vast amounts of video data efficiently.

What Our Leaders Say

“ This partnership brings together the cutting-edge video analytics capabilities of Remark AI with the robust, high-performance server solutions of industry leaders like Secure Logiq. Together, we aim to deliver seamless, scalable, and reliable solutions that empower businesses to extract actionable insights from video data with unparalleled efficiency. I am thrilled to embark on this transformative journey and drive innovation forward.

Dr. Robert X Yang
Director, Remark AI

Looking Ahead

As AI-driven video analytics continues to shape the future of surveillance and security, Remark AI and Secure Logiq are committed to pushing the boundaries of innovation. Through ongoing collaboration, both companies will introduce new, advanced capabilities that empower organisations to maximise security, streamline operations and harness the full potential of intelligent video analytics.
