IntelexVision

About IntelexVision

IntelexVision is at the forefront of AI-driven surveillance, delivering cutting-edge video analytics that redefine security, enhance situational awareness and boost operational efficiency. By leveraging advanced machine learning and deep learning, IntelexVision transforms traditional surveillance into a proactive, intelligent security tool. Their technology enables organisations to detect anomalies, identify threats and analyse behavioural patterns in real time. Recent advances in the utilisation of Aurora, the industry's first Generative AI, have made their solution applicable almost everywhere, adding context to alerts—something that was previously impossible in many use cases.

With a strong focus on tailored solutions, deep industry expertise and exceptional customer support, IntelexVision empowers businesses across multiple sectors to harness intelligent video analytics for smarter decision-making, faster response times and enhanced security outcomes.

A Powerful Partnership with Secure Logiq

The collaboration between IntelexVision and Secure Logiq unites the best of AI-powered video analytics with high-performance surveillance hardware. Secure Logiq's purpose-built servers are engineered to process and store vast volumes of HD video and AI-generated data, ensuring seamless and efficient operation of Intelex Vision's advanced analytics.

Together, this partnership delivers scalable, adaptable and resilient security solutions designed to meet the evolving needs of enterprise security, law enforcement and critical infrastructure. By combining AI intelligence with powerful, purpose-built hardware, organisations can now achieve unparalleled surveillance performance.

Transforming Security Across Industries

From critical infrastructure and smart cities to law enforcement and enterprise security, organisations need more than just passive monitoring. The IntelexVision – Secure Logiq partnership delivers cutting-edge AI capabilities, enabling businesses to process vast amounts of video data with speed and intelligence.

By creating tailored and scalable security ecosystems, this collaboration empowers organisations to enhance threat detection, automate security workflows and drive efficiency in real-time monitoring.

Key Benefits of the Partnership

- **Optimised AI Processing** – Secure Logiq's powerful processing servers ensure real-time AI analytics for advanced threat detection and behavioural analysis.

- **Scalable & Customisable Solutions** – Tailored hardware and software integrations cater to diverse security environments.

- **Unmatched Reliability** – Secure Logiq's robust server technology guarantees continuous uptime and failover support.

- **High-Performance Storage** – Efficient processing and secure archiving of AI-driven insights and HD surveillance footage.

- **Future-Proof Infrastructure** – Designed to evolve with technological advancements, ensuring long-term security investment.

What Our Leaders Say

> Secure Logiq specialises in hardware designed specifically for high-performance surveillance applications. Their expertise ensures the efficient processing and storage of HD video data—crucial for AI-driven security operations. Their robust and reliable hardware strengthens security infrastructures, making them more effective than ever.

Radek Dzik
Strategic Partnerships Director, IntelexVision

Looking Ahead

As AI-driven video analytics become the new standard in security, IntelexVision and Secure Logiq remain committed to innovation. Together, they will continue developing next-generation surveillance solutions that maximise security, optimise resources and stay ahead of emerging threats.
