London, UK, August 2026...Secure Logiq and Cortech Developments are joining forces for *Resilience by Design*, a new CPD-accredited event designed to get consultants and specifiers thinking about resilience from the very beginning of the security system design process.

Taking place at The British Library in London on 16th September and The Lowry in Salford on 7th October, the sessions will bring together Secure Logiq's expertise in server and storage technology for HD surveillance with Cortech Developments' intelligent security management software experience.

The central message is simple: resilience is not something that can be added at the end of a project. Instead, the CPD will examine how decisions made across software, hardware and infrastructure all contribute to the long-term availability and continuity of a security system and why greater collaboration between manufacturers, integrators, consultants and specifiers can lead to better outcomes.

Topics will include failover and redundancy, continuity planning, cybersecurity, infrastructure design and assessing risk throughout the design, deployment and operational stages of a project.

“Resilience is one of those words that gets used a lot, but the important question is what it actually looks like when you start designing a system,” says Ben Yoxall, Managing Director of Secure Logiq. “It isn’t one product, feature or box you can bolt on at the end. It comes from understanding how every layer of the system interacts and making the right decisions early enough for them to make a difference.

“That is really what these sessions are about. We want to get people talking about resilience at the design and specification stage and looking at the infrastructure as a complete system, rather than a collection of individual technologies.”

Each event will offer identical morning and afternoon sessions, giving delegates the option to attend at a time that best suits them. Alongside the

main *Resilience by Design* CPD presentation, attendees will hear introductions from both Secure Logiq and Cortech Developments, take part in an open Q&A and have the opportunity to network with other consultants, specifiers and industry professionals.

Nicole Davies, Marketing Manager at Cortech Developments, adds: “There is a real benefit in bringing different areas of expertise into the same conversation. Software, hardware and infrastructure all have a part to play in creating resilient security systems, so it makes sense for us to look at those challenges together.

“We want delegates to leave with useful ideas they can take into their own projects, but also with the opportunity to ask questions, share experiences and have conversations with other people facing many of the same design challenges.”

By the end of the CPD, attendees will have explored resilience as a wider lifecycle principle, identified key failover and redundancy approaches, considered the role of secure infrastructure within cybersecurity strategy and examined how risks to continuity can be addressed throughout a system’s lifetime.

The **Southern Event** takes place on Wednesday 16 September 2026 at The British Library, 96 Euston Road, London, NW1 2DB. Register here:

About Secure Logiq:

Since 2011 Secure Logiq have been developing the missing piece of the HD surveillance jigsaw, servers specifically designed for HD surveillance. A new concept in the surveillance industry, our team of technical experts have over 150 years of both IP CCTV and server experience and boasts respected thought leaders from both the HD Surveillance and IT hardware industries.

In a short space of time Secure Logiq have become the world's leading independent manufacturer of servers, workstations and client machines optimised for HD Surveillance and Video Analytics applications.

Secure Logiq's company ethos is based on four core principles - to provide the Fastest Performance, the Biggest Storage, the Most Resilience and the Best Value in HD video processing, viewing and storage technology.

About Cortech Developments:

Cortech Developments is a UK-based software company specialising in the integration and management of security, fire, life safety and building systems across critical and high-security environments.

Established in 1992, Cortech develops Datalog, its intelligent security management platform, which enables organisations to bring multiple systems together through a single, open and flexible platform. Its solutions are designed to improve situational awareness, operational efficiency and resilience while supporting the evolving security and compliance requirements of complex environments.

Cortech works closely with consultants, end users and technology partners across sectors including critical national infrastructure, utilities, healthcare, custodial and justice, transport, data centres, higher education, retail and stadiums and events.

With a strong focus on secure-by-design principles, open integration and long-term interoperability, Cortech helps organisations create connected security environments that can adapt as technology, operational requirements and threats evolve.
