November 2026 *For Immediate Release*

Secure Logiq unifies Logiqal CORE Architecture on Logiqal 9.x

Crawley, UK, November 2026… Secure Logiq has brought its Logiqal software and storage together in a single product family with the launch of Logiqal CORE Architecture. From today, every product in the family runs on one version, Logiqal 9.x. At launch, the family comprises Logiqal CORE and Logiqal Video Volume. With software, hardware and support all coming from one manufacturer, customers can keep their servers running and their video securely stored.

Logiqal CORE is application-agnostic virtualisation and failover software for security servers. A single perpetual licence per server protects whatever runs on that server and restores service on a standby server if a failure occurs.

On the hardware side, Logiqal Video Volume is SAN storage built by security specialists and optimised for CCTV. Two 1U controllers provide dual-controller high availability, serving RAID-5 and RAID-6 protected volumes from 12, 24 and 60-bay expansion chassis.

Every Logiqal 9.x product comes with a support plan. The plan covers every software release during its term, whether a major release, a minor update or a patch. It also includes unlimited remote help from Secure Logiq's engineers with configuration, software and day-to-day operation, with no separately billed project tier on top.

"The licence gets you the software, but the support plan keeps it current, covered and backed by our engineers," said Ben Yoxall, Managing Director at Secure Logiq.

“The people who built Logiqal CORE Architecture are the same people who answer when a site needs help, for as long as the plan runs.”

Logiqal CORE Architecture is available now through Secure Logiq’s distributors and system integrators.

About Secure Logiq:

Since 2011 Secure Logiq have been developing the missing piece of the HD surveillance jigsaw, servers specifically designed for HD surveillance. A new concept in the surveillance industry, our team of technical experts have over 150 years of both IP CCTV and server experience and boasts respected thought leaders from both the HD Surveillance and IT hardware industries.

In a short space of time Secure Logiq have become the world's leading independent manufacturer of servers, workstations and client machines optimised for HD Surveillance and Video Analytics applications.

Secure Logiq's company ethos is based on four core principles - to provide the Fastest Performance, the Biggest Storage, the Most Resilience and the Best Value in HD video processing, viewing and storage technology.
